The Burden of Diabetes in Oregon

Diabetes is growing at an epidemic rate in the United States. According to the Centers for Disease Control and Prevention (CDC), nearly 30 million Americans have diabetes and face its devastating consequences. What’s true nationwide is also true in Oregon.

Oregon’s diabetes epidemic:

Approximately 375,847 people in Oregon, or 11.2% of the adult population, have diabetes.

- Of these, an estimated 98,000 have diabetes but don’t know it, greatly increasing their health risk.
- In addition, 1,071,000 people in Oregon, 36.1% of the adult population, have prediabetes with blood glucose levels higher than normal but not yet high enough to be diagnosed as diabetes.
- Every year an estimated 19,000 people in Oregon are diagnosed with diabetes.

Diabetes is expensive:

People with diabetes have medical expenses approximately 2.3 times higher than those who do not have diabetes.

- Total direct medical expenses for diagnosed and undiagnosed diabetes, prediabetes and gestational diabetes in Oregon was estimated at $3.1 billion in 2012.
- In addition, another $951 million was spent on indirect costs from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

In 2015, the National Institute of Diabetes and Digestive and Kidney Diseases at the National Institutes of Health invested $10,369,906 in diabetes-related research projects in Oregon.

The Division of Diabetes Translation at the CDC spent $1,693,003 on diabetes prevention and educational programs in Oregon in 2016.
