

The Burden of Diabetes in Texas

Diabetes is an epidemic in the United States. According to the Centers for Disease Control and Prevention (CDC), over 30 million Americans have diabetes and face its devastating consequences. What's true nationwide is also true in Texas.

Texas's diabetes epidemic:

Approximately **2,990,000** people in Texas, or 14.6% of the adult population, **have diabetes**.

- Of these, an estimated **663,000** have **diabetes but don't know it**, greatly increasing their health risk.
- In addition, **6,884,000** people in Texas, 37.2% of the adult population, **have prediabetes** with blood glucose levels higher than normal but not yet high enough to be diagnosed as diabetes.
- **Every year** an estimated **187,000** people in Texas are diagnosed with diabetes.

Diagnosed diabetes costs an estimated \$26 billion in Texas each year.

The serious complications include heart disease, stroke, amputation, end-stage kidney disease, blindness – and death.

Diabetes is expensive:

People with diabetes have **medical expenses approximately 2.3 times higher** than those who do not have diabetes.

- Total **direct medical expenses** for diagnosed diabetes in Texas were estimated at **\$18.9 billion in 2017**.
- In addition, another **\$6.7 billion** was spent on **indirect costs** from lost productivity due to diabetes.

Improving lives, preventing diabetes and finding a cure:

In 2017, the **National Institute of Diabetes and Digestive and Kidney Diseases** at the National Institutes of Health invested **\$86,083,996** in diabetes-related research projects in Texas.

The **Division of Diabetes Translation** at the CDC provided **\$2,242,000** in diabetes prevention and educational grants in Texas in 2017.
